WHAT IS CLAIMED IS:

- 1. A cloned gene encoding the expression of an antigenic mutant pertussis toxin with substantially reduced enzymatic activity.
- 5
 2. An antigenic mutant pertussis toxin having substantially reduced enzymatic activity.
- The mutant toxin of claim 2 having a single amino acid substitution comprising replacing arginine with lysine at position 9 of S1 subunit.
- 4. A composition comprising immunogenic amount of the toxin of claim 2 in a pharmaceutically acceptable carrier.
